

Title of paper	Wide band high efficiency printed loop antenna design for wireless communication systems
Authors	Denidni, T.A., L., Lim, Y., and Rao, Q
Year of Publication	2011
Publishing details	International Conference on Education Technology and Computer (IEEE)
Summary	A fractal monopole antenna is proposed for the application in the UWB frequency range, which is designed by the combination of two fractal geometries. A fractal micro strip antenna is used for multiband application in this project provides a simple and efficient method for obtaining the compactness. A sierpinski carpet based fractal antenna is designed for multiband applications. It should be in compactness and less weight is the major point for designing an antenna. This antenna is providing better efficiency.
